Heavy Rain	Heavy Rain	Heavy Rain	Heavy Rain	Light rain showers	Sunny intervals	Light snow	Heavy snow showers (night)
Precipitation probability							
70%	70%	70%	90%	30%	20%	40%	70%

Forecast for Saturday 14 Jan 2023

Weather: Cloudy with outbreaks of rain, heavy at times overnight. The rain continuing through the morning but tending to clear through by late morning with some cloud breaks developing and perhaps some brighter or sunny spells. Through the afternoon showers will develop and these will turn wintry above 500m, showers may cluster together to give longer spells of snow on the tops and combined with westerly gales some blizzard like conditions can be expected by late afternoon with a severe wind chill expected on the mountains.

Chance of cloud-free hill tops above 600m: 20%, improving to 60% for a time when the rain clears but dipping back to 50% in showers later.

Low cloud and visibility: Extensive low cloud expected from daybreak with overcast layers above 300m, perhaps cloud bases slightly higher around eastern areas. Visibility expected to be poor in heavy rain on the mountains in the morning. Cloud lifting and becoming more scattered by late morning with a good chance of some views for a time in the middle of the day, visibility will become good too for a time. As afternoon showers develop cloud will thicken and lower over the summits in showers and the potential for blizzard of white out conditions on the mountain tops during the afternoon and evening with summit gales.

**Level above which ground is expected to be frozen/snow is expected to settle.*

Meteorologist's View

Winds becoming very strong during the afternoon with freezing level lowering to 5-600m and snow and sleet showers expected, blizzard conditions are possible and it would be easy to be fooled by early rain and milder conditions. Gales on the summits by evening.

Recent rainfall: measured at Neuadd: altitude 353m

Recorded at	Last 24 hours:	Last 48 hours:	Last 72 hours:
15:00 on Fri 13 Jan 2023	2.4mm	63mm	80mm

Forecast for Sunday 15 Jan 2023

Weather: Wintry showers are expected overnight with a period of heavy precipitation likely, snow above 500m. Becoming brighter on Sunday morning with winds easing for a time and some bright or sunny periods likely through the afternoon. A period of strong winds and heavy rain or snowfall is likely in the evening but still some doubt about the track of this system.

Maximum wind: Westerly 30-35mph with gusts 40-45mph backing southwesterly 20-30mph later.

Chance of cloud-free hill tops above 600m: 30%, associated with overnight sleet and snow, improving to 70% for a time, cloud still dipping over the summits in afternoon showers, deteriorating to 20% again in the evening.

Low cloud and visibility: Broken cloud layers above 400m and poor visibility in the morning with some blizzard conditions during the morning. Cloud lifting above summits in the afternoon with visibility mostly good for a time, although lowering again in any showers, cloud becoming extensive again in the evening with whiteout conditions on the mountains a possibility in blizzards.

Temperature: **Valleys:** Plus 5 falling to 3 Celsius later.
At 600m: Zero Celsius.
Freezing level: 5-600m possibly rising to 800-1000m later.
